

# CIP

## CONTROL AND INSPECTION OF PRODUCTS

- The CIP control system is designed to monitor and control packaging processes in the packaging that are not covered with standard products.
- Product inspection in thermoformers.
- Control the number of cartons/bottles and products inside the box before sealing.
- Vials inspection.
- Color rings in ampoules.
- Correct position and/or cap color.
- Presence / absence of parts of the product.
- Touch screen control panel with the possibility to connect via Ethernet multiples cameras for different process control.
- High precision (user configurable).
- Friendly interface. Easy to use.
- B/W or color, high resolution.
- High processing speed, up to 1200 units per minute.
- Ethernet connection, the system is easily extendable and compatible with other networks.
- Availability module norm 21 CFR part 11 - Annex 11.
- Documentation for validation is available (DQ/OQ/IQ...).

### MULTIPLE CONTROLS

Controls the number of cartons, bottles, vials, ampoules, color rings, position and/or cap color, presence/absence of parts of the product, etc.

### HIGH RESOLUTION

High definition cameras up to 1280x1024 pixels.

### HIGH SPEED

Up to 1200 units per minute.
